Abstract

This is a great paper and it has a concise abstract.
Keywords: List of keywords, comma separated.

1. Introduction

This is where the content of your paper goes. Some random notes:

- You should use L^AT_EX(Lamport, 1986).
- JMLR/PMLR uses natbib for references. For simplicity, here, \cite defaults to parenthetical citations, i.e. \citep. You can of course also use \citet for textual citations.
- You should follow the guidelines provided by the conference.
- Read through the JMLR template documentation for specific L^AT_EXusage questions.
- Note that the JMLR template provides many handy functionalities such as \figureref to refer to a figure, e.g. Figure 1, \tableref to refer to a table, e.g. Table 1 and \equationref to refer to an equation, e.g. Equation (??).

Acknowledgments

We thank a bunch of people.

Algorithm 1: Computing Net Activation

Input: $x_1, \dots, x_n, w_1, \dots, w_n$

Output: y , the net activation

$y \leftarrow 0$;

for $i \leftarrow 1$ **to** n **do**

$y \leftarrow y + w_i * x_i$;

end
